**CARPITHIAN ENGLISH WALNUTS****KENTUCKY PAPER SHELL**

The thinnest shelled Carpithian - can be crushed with thumb and finger; medium-size nut; very rich sweet flavor; no bitterness; very rank growth; bears young; needs a pollinator for full production.

(BOONE)

Large-size medium shell; the sweetest, richest nut of all; SUPERIOR to the California nuts in flavor; medium growth; bears very young, has produced nuts second year from graft in nursery row; self-pollinating; heavy producer, bears when others fail; bears in clusters, from two to ten or twelve in a cluster some seasons; one of the best CARPITHIANS

(KENTUCKY GIANT)

The largest, thin-shelled Carpithian; has produced nuts two and a half inches long by one and three-fourths inches wide; a rich, sweet nut; rank growth; bears young; bore first nuts sixth year; bore six straight crops; produced over a bushel the twelfth year; is self-pollinated or partly so; production might be increased by cross-pollination.

(COLBY)

From the University of Illinois; a fine-looking nut; moderate growth; large size, thin shell; bears young; some seasons has slightly bitter flavor.

(THOMAS BLACKWALNUT)

Large size; medium shell; a good cracker; a young heavy producer; in some locations one of the leading varieties.

(FARRINGTON)

Kentucky's best; large size; thin-shell; excellent cracking qualities, cracks out many quarters and halves; highly recommended by University of Kentucky; starts bearing young; a heavy producer.
